Managing Tomcat

For security, access to the `manager.webapp` is restricted. Users are defined in:

```
$CATALINA_HOME/conf/tomcat-users.xml
```

In Tomcat 8.5 access to the manager application is split between different users. [Read more...](#)

Experiment 5 - Understanding modification of Web.XML

The web.xml Deployment Descriptor file describes how to deploy a web application in a servlet container such as Tomcat.

This file is required for every application you deploy on Tomcat. You will find one in the jsp-examples, servlet-examples and ROOT applications provided on a new Tomcat website, and every web application example you download, including inside WAR files.

The location of the file is always the same: application root/WEB-INF/web.xml

At minimum, the file needs to contain an XML descriptor and an opening and closing <web-app> tag. Open the configuration file "web.xml". We shall enable the directory listing by changing "listings" from "false" to "true" for the "default" servlet.
<param-value>true</param-value> like:

```
<param-name>debug</param-name>
<param-value>0</param-value>
</init-param>
<init-param>
    <param-name>listings</param-name>
    <param-value>true</param-value>
</init-param>
<load-on-startup>1</load-on-startup>
</servlet>
```

Experiment 6 - Creating Web Sites Using PHP

PHP Files

Experiment 9 - Writing and Understanding Program in Python

Python File

```
In [7]: import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
%matplotlib inline

In [9]: def maths(a,b):
k=a+b
return k

print('The addition of two numbers is ',maths(2,3))

The addition of two numbers is 5
```

Experiment 10 - Use python Libraries like Math's statistics to create program for Scientific Computations

Python File

```
In [10]: import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
%matplotlib inline
from sklearn.datasets import load_iris
a=load_iris()
a
```

```
